.....THE COMMITTEE

Under the Alberta Metis Association the following members have been delegated the responsibilities for general coordination of the Housing Program.

Working in conjunction with the Alberta Housing Corporation, the committee will serve as representatives for the Metis and Indian people in the development of new housing.

MEMBERS: Mr. S. Daniels, Chairman  
Mr. E. Collette  
Mr. E. House

Rec'd: Jan 9/79  
Order No.: Free  
Price:  
Acc. No.: Metis Association of Alberta.

..... THE DESIGN

The following sketch plans were selected by the Housing Committee of the Alberta Metis Association from nearly two dozen drawings reviewed. The intent of this selection is to illustrate the basic concept in house design that is desired by Metis and Indian families. It is certainly to be understood that the designs presented here are not intended to satisfy the needs of every family. Several conventional builder's house designs were reviewed and found to be acceptable, given that minor alterations, such as the addition of enclosed porches were incorporated.

It is very important that in the planning of a housing project, the needs, spatially and environmentally, of the individual family be taken into consideration. To achieve successful projects, flexibility in design must be maintained.

It is the opinion of the committee that the selected designs provide for flexibility, not only of internal space but adaptability to construction in remote areas with local materials on one hand and factory assembly on the other.

.....THE STANDARDS

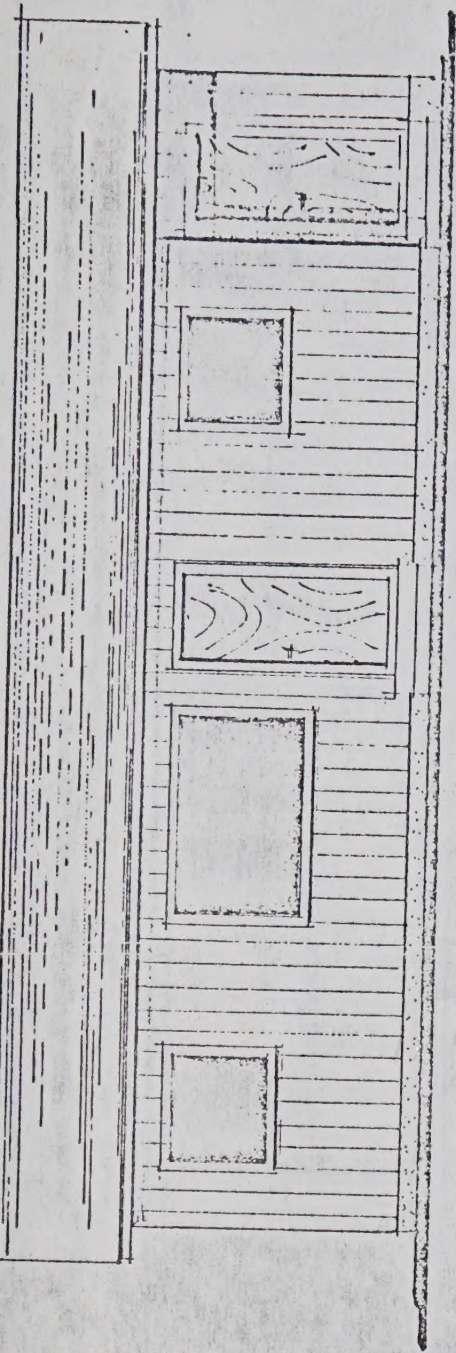

It is the recommendation of the Committee that the construction of new homes be as close as is practical to conformity to the Canadian Code For Residential Construction (Part 9, N.B.C. Latest Edition)

It is further recommended that:

- Each home be wired for electricity regardless of present availability of power
- Where economically feasible electricity be connected to each home
- Each home be provided with new ranges, refrigerators and furnaces
- Each home be provided with space for at least one standard three-piece bathroom
- Where economically feasible a bathroom and septic or sewer system be connected to each home
- Each home be provided with a water supply and plumbing for at least one sink
- Materials used for interior and exterior finishes be selected to minimize maintenance.
